

The diagram illustrates a 16-channel signal conditioning module. It features a 3P power input (L, N, PE) and a 24V 220V AC input. The module is connected to a 16A/63A 3P power source and a 24V 220V AC source. The output is connected to a 16A/63A 3P power source and a 24V 220V AC source.

The diagram illustrates a 3-phase 4-wire system. On the left, a 3-phase supply is connected to a 300W AC load. The load is connected to a 3-phase 4-wire system. The system includes 10 B10A 1P 6 switches, each with a 300W AC load. The switches are connected to a 3-phase 4-wire system. The system is labeled with PE, N, and L. The load is labeled with 300W AC. The switches are labeled with B10A 1P 6. The diagram shows the connection of the 3-phase supply to the load and the switches, and the connection of the switches to the 3-phase 4-wire system.
